Genome FASTAs
Reference databases
(CheckM, GTDB R232, GUNC)
Input
Process
Output
Stage inputs / contig variants
(Genome QC, SeqKit)
Assembly statistics
(SeqKit)
Completeness / contamination
(CheckM lineage_wf)
Composite quality score
(Genome QC)
Taxonomic classification
(GTDB-Tk, R232)
Predict rRNA genes
(barrnap)
Within-genome rRNA consistency
(BLAST+, Genome QC)
Choose one contig-length variant
(Qscore, N50, length)
tRNA prediction
(tRNAscan-SE)
Chimerism assessment
(GUNC)
Integrate measurements / status
(Genome QC)
All assessed genomes
Master QC table
ANI groups
(FastANI)
Marker phylogeny
(GTDB alignments, FastTree)
Genome atlas
(pandas, Matplotlib, seaborn)
Final selection
[optional criteria]
Explore / select / export
Genome QC Explorer
Selected subset
Atlas + linked tables
CSV / selection records
